Value
Spliceosome
Peroxisome
Proteasome
MAPK signaling pathway − yeast
Nicotinate and nicotinamide metabolism
Phenylalanine, tyrosine and tryptophan biosynthesis
Fatty acid biosynthesis
RNA degradation
Lysine biosynthesis
Pentose and glucuronate interconversions
Pyrimidine metabolism
One carbon pool by folate
Glycerolipid metabolism
Amino sugar and nucleotide sugar metabolism
Arginine and proline metabolism
Fatty acid degradation
Lysine degradation
Propanoate metabolism
Pantothenate and CoA biosynthesis
Tryptophan metabolism
Valine, leucine and isoleucine degradation
Pentose phosphate pathway
Histidine metabolism
2−Oxocarboxylic acid metabolism
Citrate cycle (TCA cycle)
Pyruvate metabolism
Glycolysis / Gluconeogenesis
Carbon metabolism
Aminoacyl−tRNA biosynthesis
Base excision repair
DNA replication
Mismatch repair
Nucleotide excision repair
Sphingolipid metabolism
Various types of N−glycan biosynthesis
Protein export
RNA polymerase
Other types of O−glycan biosynthesis
Phagosome
RNA transport
Phosphatidylinositol signaling system
